### **ABSTRACT**

#### **Every Journey Begins With the First Step**

The curriculum development process systematically organizes what will be taught, who will be taught, and how it will be taught. Each component affects and interacts with other components. For example, what will be taught is affected by who is being taught (e.g., their stage of development in age, maturity, and education).

The **CURRICULUM DEVELOPMENT MODEL** on the next page shows how these components relate to each other and to the curriculum development process. It begins when an issue, concern, or problem needs to be addressed. If education or training a segment of the population will help solve the problem, then curriculum to support an educational effort becomes a priority with human and financial resources allocated.

**KEYWORDS:** Curriculum, Education, Nursing Education
