

ASSESSING THE PERSONAL HYGIENIC MEASURES OF SCHOOL GOING CHILDREN IN SELECTED SCHOOL, THIRUVALLUR

SHEEBHA SUVITHA, CELINA.D & KANCHANA

Findings of a Study Conducted at Selected School, Thiruvallur, Tamil Nadu, India

ABSTRACT

Personal hygiene is a public health tool that is used for disease prevention and health promotion in individuals, families and communities. Good personal hygiene among school children could be effective towards preventing infectious diseases. Previous studies have indicated that children with proper hand washing practices are less likely to report respiratory and gastrointestinal symptoms.

KEYWORDS: Personal Hygiene is a Public Health Tool, Children with Proper hand Washing Practices, Respiratory and Gastrointestinal Symptoms
