

EFFECT OF FLUORIDE ON TEETH IN MEDICINE - A REVIEW

ZAINAB MAHMOOD ALJAMMALI

Assistant Lecturer, Department of Medicine Dentistry, College of Dentistry, Iraq

ABSTRACT

Fluoride is a mineral that occurs naturally in all water sources, including the oceans. Research has shown that fluoride not only reduces cavities in children and adults, but it also helps repair the early stages of tooth decay, even before the decay is visible. Fluoride is the best cavity fighter to help keep the whole family's teeth strong — no matter their ages
