VOCATIONAL TRAINING

SONU KUMAR SUMAN, SNEHIL UPADHYAY & TUSHAR GUPTA

CSE (Galgotias University) Greater Noida, India

ABSTRACT

In line with the NEW EDUCATION POLICY, Our Government has strongly emphasized SKILLS TRAINING for anyone who wants to develop their skills to a new level. With this in mind, we come up with a solution in the form of an app that will help everyone interested in improving their skills.

This application will contain the following features: -

• *Anyone with a particular skill (of ancient handicrafts) can include related videos, documents, or other genres, which will help others who are interested in handicrafts can learn from that.*

• *Our app will also help to provide industry-enhancing skills so that everyone in the industry can develop their skills.*

In the meantime, we will work well in the following areas: -

• *Agriculture.* • *Industrial training.* • *Decay management.* • *Arts: (Crafts, regional arts, etc.).*

KEYWORDS: Job Training, New Education Policy

INTRODUCTION

The Project Vocational Training Project app has been developed by taking the reference to the **NEW EDUCATION POLICY** where hands-on training has been given greater emphasis so that everyone in India can learn and grow. With this in mind, we come up with an app solution that will help everyone in the world grow. The great advantage of using this app is that no direct communication is required for anyone who can learn and improve their skills with just a smartphone. We plan to make this app with the latest technology such as IONIC framework, Firebase, and various other libraries that will be used that will provide a good User Experience and a smooth interface. With a backend, we use a Firebase database that will provide improved and better data storage resources so we can display our easily related documents, videos, etc.

PROBLEM BUILDING

The New Education Policy (N.E.P) is a comprehensive framework for primary and tertiary education and vocational training in rural and urban areas of India. The policy aims to transform the education system in India by 2030. The vision of the National Education Policy is: The National Education Policy of 2019 looks at the central education system in India that contributes directly to transforming our country into a society of equal and healthy information through the provision of quality - quality education for all. As our Honourable Prime Minister has said, everyone should take training that will eradicate poverty and give our youth a chance to get jobs. Poverty alleviation, job creation, the provision of skilled workers in large, medium and micro enterprises, and meeting the international needs of workers in skills training must be taken to achieve the industrial goal. We are therefore

coming up with a solution to provide vocational training through our app that will help everyone develop their skills and participate in our Prime Minister's vision of nation-building.

EASY ANALYSIS

A feasibility study that looks at all the relevant aspects of the project you care about — including technical, operational, economic and financial.

Feasibility Analysis is the process of ensuring that a strategy, strategy, or construction is feasible and logical.

Based on the information presented in our mobile app, it is possible that job training is possible and can help all citizens to learn new skills and can contribute in various fields as their skills are learned.

TIME STATEMENT

Our app is a way for everyone to learn and grow. In the meantime, our app will focus on the following fields: Agriculture, Waste Management, Industrial Training, Arts and Culture. In agriculture, we have seen that modern agriculture plays an important role in various parts of the nation such as Kerala, Punjab, Delhi, Rajasthan where organic farming is practiced on a large scale. This transfer of skills is possible through the direct transfer of information from one person to another but is limited to a few people. So we come up with a solution that focuses directly on the transfer of SKILL to each and everyone through our app where everyone can learn to practice organic farming by professionals in this field so they can grow their business and provide healthy and healthy fruits and vegetables to people. One of India's biggest worries is waste management, and most NON-BIODEGRADABLE waste products in India are causing a lot of problems.

But then we see regions like Arunachal Pradesh that have taken various measures to reduce the waste generated there. Eg. Bamboo bottles are used instead of plastic bottles. Jute made luggage etc. This also helps to establish various industries to make these products out there. But if we see it in other parts of India except that the rich availability of workers and raw materials does not reflect these things and this is due to the lack of proper skills in these provinces. We can also provide videos, documents, and related material for everyone to develop their skills in these areas and can assist in waste management. Similarly, when we talk about the appropriate skills needed to work in small or large industries various people have that in order to be able to take advantage of our application where training-related videos are available that can clarify a particular skill and made by an industry expert in that field where they can take help and industry. India is known for its culture and art, and the whole state of INDIA has a unique art and it is true that many people did not get a chance to show off their artistic and cultural skills. For a while. Anyone with a particular skill (handcraft ex) can upload related videos, documents, or other genres, which will help others who are interested in handicrafts can learn from that to increase employment.

CONCLUSION

This paper is an online making of an institution used to prepare professional courses. Through this site research can discover all the subtleties beyond, the courses offered at the center and remove all his questions about these courses and their extensions without explicitly visiting the site, thus saving his time and money. She can choose by researching the subject being taught and all the importance of learning within the term indicated. You can get all the data about the current meeting, collections, courses, openness through this site without any problem. Here the study can register and can make his record and after that, they can choose courses. After that, he can join the organization after a while.
