

COLLEGE EVENTS DISSEMINATION SYSTEM

RISHABH KEDIA, ABHISHEK PRATAP SINGH & VARUN GUPTA

CSE (Galgotias University) Greater Noida, India

ABSTRACT

In line with the NEW EDUCATION POLICY, Our Government has strongly emphasized SKILLS TRAINING for anyone who wants to develop their skills to a new level. With this in mind, we come up with a solution in the form of an app that will help everyone interested in improving their skills. College Events Dissemination System provides a simple interface for spreading various events scheduled by various clubs. It can be used by educational institutes or colleges to spread important notices online. The creation and management of accurate, up-to-date information regarding events are important in the university as well as colleges. Students can check ongoing and upcoming events online. If a student is interested in participating in an upcoming event, then they can book their seats. All the details of the events are to be shared in various tabs. It will help to maintain the database of the workforce and the job roles that are assigned to the club members. And lastly, viewing the results of all events held in the college. The main idea of this project is used to maintain the College Events information and organize the events.

The tools constitute Web development, JavaScript on the Website. The back process for data managing tool constitutes a Firebase database and developed on the platform-independent browser environment.
