

APPLICATION OF SUSTAINABILITY IN WOMEN'S FASHION BY USING THE RECYCLED FABRICS AND GARMENTS AS RIBBONS

Dr. WESAM Y. SABBAGH

Associate Professor, Fashion Design Department, College of Designs & Arts, Umm Al-Qura University

ABSTRACT:

The aim of the research is to apply the environmental aspect (sustainability) by recycling unused fabrics and garments to make ribbons and implement them in the executed uniform to achieve aesthetic aspects and design aspects. The research followed the analytical descriptive method in collecting and classifying garments and fabrics, conducting different experiments coordinating and choosing between them to implement appropriate ribbons for women's fashion. To reach the objectives of the research and verify the validity of its hypotheses, Nine designs were implemented, and evaluated by using a questionnaire by (15) specialists. The results referred to the priority in evaluating the study aspects by the specialists to the executed designs using the unused fabrics and garments as ribbons first is the environmental aspect, followed by the design aspects, then the aesthetic aspects. Also, statistically significant differences were found at the level (0.05) between the evaluations of the implemented designs for the application of sustainability in achieving the evaluation aspects as a whole. The research recommended that designers should take advantages of the available resources and transform them to recycle and benefit from them to achieve sustainability.
