ABSTRACT

The intent of the investigation is to inspect today's situation of zero scarp way of lifestyle in residents of Mumbai. This study is completely based on self actualization and survey research. In day-to-day life, we are generating a lot of waste unknowingly or knowingly which pollutes the surroundings and it results in many hassles for animals and flora as well as humans. This study is about recognizing the principal factors of handling of scrap as well as amending etiquette towards no scrap lifestyle. The investigation achieves a scenario contingent on equipment, procedure and utilized science which facilitates metropolitan areas in revolution to no waste places. On the other hand, they need low cost practicable and a nice local regulatory framework. The idea of a zero waste city consists of 100% recycling of all resourced waste materials. A questionnaire based on the above topic has been delivered to 300 people in Ghatkopar, Mumbai which shows that approximately 60% of people are aware of zero waste lifestyle and 40% people are unfamiliar with it.

KEYWORDS: *Zero Scrap, Waste Management, Zero-Waste City, Environment Friendly.*
