ABSTRACT

School health services are an extension of the health care that starts in the prenatal period and is continued through in intranatal, natal and preschool years. The school is an ideal place of learning and growing up for the school child. When it serves as an important institution in the life of the child, it also brings certain hazards such as drowning, fall, road traffic accident, wounds serious bleeding, dislocation, sprain and fracture ,foreign bodies in the eyes, ears, nose and throat. Today the nurse is the only member of the team of workers concerned with the health of school child the main focus of school health nurse is keeping children healthy, by stressing health maintenance, wellness education and injury prevention.

KEYWORDS: Prenatal Period, Intranatal, Natal and Preschool Years, Fall, Road Traffic Accident & Wounds Serious Bleeding
