ABSTRACT

In the world of networking Peer-to-Peer live streaming approaches have become popular in recent years. The new arising P2P applications on the internet are VoIP or IPTV. Here in this paper we are going for the comprehensive study about P2P IPTV applications and their effect on the network. For that we are choosing SopCast as IPTV for case study. Through the study, we collect a huge amount of data then study the applications/users behavior and their effect of traffic in the network.

KEYWORDS: IPTV, P2P Measurement, SopCast.
