ABSTRACT

The present paper focuses on the technology-based learning of English language with particular reference to internet resources and how they help enthusiastic language learners enhance their language skills from the very basics to an advanced level with some aid of a language teacher in the initial stages. The paper informs of the journey of a language teacher who fervently keeps on trying to provide wholesome information in the process of making an amateur language learner into a perfect one. This is an outcome of the two teachers' expertise with relevance to the understanding of difficulties that language learners face in becoming successful speakers and the effective utilization of technology in this regard.
