ABSTRACT

In India from last several years government provides subsidies to agriculture sector in direct & indirect form. But how much they are beneficial to agriculture sector is question. To find out the answer of this question authors study about factors measure & contributing to growth of agriculture sector. e.g. Finance, Production, Infrastructure, Irrigation & Technology etc. The exact measurement of impact of subsidies on agricultural sector is not easy task. The subsidies are really beneficial to agriculture sector but due mismanagement in distribution system they are not reach to end users i.e. farmers in India. This study based on secondary data which are published by government & researchers.
