ABSTRACT

The purchase and store section of the Higher Education Institutes (HEIs) have responsibilities to provide high qualities materials and services at the lowest cost during timeline. This paper explore some challenges e.g. manual way of documentation, corresponding, inventory and less knowledge about quality oriented productivity etc. which causes of delay in products and services matter. Therefore the section can't provide product and services on the time, and then the organization suffer badly, it will also affect the capacity to form partnerships with other university, this system has been developed to provide alternative solution for saving the time. To get fast requisition, get permission, invites low tender bid, and provide materials to end-destination. This system developed to provide a low cost alternative against the existing manual method. The web base system fast, efficient and effective against manual way of communication and facilitated both the staff of section and storekeepers.
