ABSTRACT

From the time immemorial Man is using technology. Every invention & discovery aided by thirst for betterment, took him towards development. But it's time to check the dimension of development (which is killing than thrilling). Human race is facing irreparable loss of ecology, ethics & culture. The individualism is not much bothered about collective welfare or advancement. The concept of universal brotherhood is becoming fragile & is evident from many case studies. We need to grow with the technology. (Ethically, morally as well as culturally.) The cross cutting culture can only save the universe. Overlapping in every sense is a sign of ruin for human race. Very soon it will eclipse the Human civilization. Learning from the past, acting sensibly and proactively is the only solution. Then only sustainable development can take a effortless breath.

KEYWORDS: Ecology, Welfare, Human Race, Sustainable Development, Civilization
