ABSTRACT

"I don't have Change. Please give me change". These are some of the usual statements we often encounter at public places, typically in Indian scenario. This paper discusses this common societal problem and suggests some possible solutions to it. A case study was also done to survey the effect of all the proposed approaches. The results of the survey were analyzed along with the features of each proposed solution. The paper also describes how Computer Science can be useful in context of this problem.
