ABSTRACT

Virtual Machine development means virtualization of whole system (Hardware, Software) and that system to be accessible through network any time anywhere in this world.Vmware workstation provides the facility of virtualization. As we can virtualizes our physical machine using vmware as well made it access able offline over the host based physical machine. In this paper we have shown the development procedure of virtual machine on Core-i7 using vmware workstation. We have also discussed about the problems with their solutions which we had faced during this development work.

KEYWORDS: Cloud Computing, Vmware Workstation, Virtualization & Core-i7
